Kbps Description: Menudo 320

KbpsDowntown Grand Rapids

Restaurants Dubbed “America’s most livable city” by Forbes Magazine, Grand

Rapids, Michigan is a great place to explore, shop, dine, play and get away from it all. One of the largest cities in

Michigan with over half a million residents, Grand Rapids boasts fantastic hotels, restaurants, attractions and events for everyone. There are great restaurants

for every budget, cuisine and cuisine style, all within easy walking distance of each other. Some zooplankton larvae

ingest radiolabeled phototrophic bacteria from the environment. Microscopic zooplankton larvae release extracellular inorganic phosphate (Pi) into the water column, and some of the radioactivity can be incorporated into the food web. In this study, we examined the ability of copepod and shrimp larvae to ingest and assimilate the radioactive phototroph *Eubacterium* spp. A suspension of *Eubacterium* sp. was fixed and then incubated with embryonic and post-embryonic stages of copepods and shrimp. A significant increase in

radioactivity of the zooplankton was detected when larvae were fed with the radiolabeled phototroph. The results confirmed that the copepod and shrimp larvae are capable of feeding and incorporating radiolabeled phototrophic bacteria from the water column. Therefore, the zooplankton may play a role in the cycling of radioactive elements such as strontium, cobalt, and cesium.

Q: Set multiple params with WebMethod? I have a method that takes in three different values from the request, lets call them: a = param1 b =

param2 c = param3 All three must be provided, and it will return a string, which is constructed as follows: String combinedReturn = a+b+c; The method has to be accessible by both iOS and Android. The iOS app passes in the string using POST. I use JSON to parse the combinedReturn string. I'm trying to think through how to structure this. I was thinking that I could create a class that will convert the string to a "dictionary", parse the keys, and then pass in the dictionary to my Web
