Learning Mobile Author [March-2022]

What's New in the Learning Mobile Author?

Learning Mobile Author is a professional solution that enables you to author, design, test and publish mobile content in order to deliver it to PDAs and mobile phones. The product combines a programming language called XNA 4.0, a technology for authoring applications for mobile phones called XNA Touch, and a tool called ScriptStudio to help you create, design, test and publish mobile content. When you develop applications for mobile phones you need to consider the hardware of the device itself, the limitations of the interface of the operating system, and the different features provided by each mobile phone manufacturer. The program that you use to author your applications must then take into account these different characteristics, and Learning Mobile Author has been built in such a way that it supports all these features. Besides, the editor has been designed in a way that makes it very easy to use. Using XNA Touch, Learning Mobile Author is the ideal solution for creating, designing, testing and publishing your applications, which makes it a unique solution for the development of mobile applications. New features: + Improved user interface - Built-in help and documentation - Code integration - XNA Touch and XNA 4.0 engine integration - Direct integration with the scripting engine - Autocompletion of XNA Touch API - Code templates and editors for XNA Touch code - Help for XNA Touch code - Templates for designing sprites, image and menu bar - Help for sprites and image designers - Templates for designing menus - Help for menu designers - File types supported: MDK, XNA Touch, PNG, JPG, BMP, GIF - Mobile phone screen orientation support - HTML templates + The editor is split in 3 parts, one for creating the graphics, one for creating the menus, one for creating the scripts + It is possible to add buttons, scroll bars, borders and labels to the template + Scripting language based on the ScriptStudio Scripting Language and IDE + It is possible to define both local and remote scripting language options + The interfaces of Learning Mobile Author and Learning Mobile Author Studio are based on Learning Mobile Author Scripting Language, which is used to create scripts + It is possible to define a scripting code (main code) and a graphical code (sub code) + It is possible to create the main code and the sub code as Scripting Language or XNA Touch, which means that they can be inserted in the code as functions + Templates and code editors for writing scripting code + Templates and code editors for writing XNA Touch code + It is possible to use the main and sub code as XNA Touch or scripting language in Learning Mobile Author Studio + It is possible to create objects directly on the Editor
