The iBG Monitor application is a Java-based network monitoring and management tool designed to help you remotely manage a number of servers and workstations. The application is available to download for free in two editions: Standard and Extended. They differ in the number of licenses for the same features. After purchase, you are able to download and install further licenses, as well as the standard edition of the application. The application comes with a 30-day trial. It can be installed on both 32- and 64-bit Windows OS. A number of network adapters, such as Ethernet, SCSI, serial and wireless interfaces, are supported. The Standard edition allows you to monitor a minimum of one server and up to ten workstations. The Extended edition allows you to monitor a minimum of ten servers and up to thirty workstations. Both editions allow you to manage and administer multiple clients, as well as events, settings and log files. By default, iBG Monitor allows you to place a check box on each of your servers. The standard edition allows you to configure the list of all servers. The Extended edition allows you to do the same with the number of workstations. You may also configure the application to show or hide events, such as rebooting, restarting and shutting down, as well as system details and the list of active files. The standard edition is able to support multiple WAN connections. The Extended edition supports multiple connections, as well as multiple authentication methods and VPN applications. Highlight the OpenNetworkMonitor jar file using WinZip. Double click on the jar file to decompress it. Copy the OpenNetworkMonitor.jar file to the application directory of iBG Monitor. This can be found in the version of iBG Monitor you downloaded. Start iBG Monitor Click on the OpenNetworkMonitor icon on the toolbar. The iBG Monitor window should now appear on your screen.
