Bio-analytical methods are generally not available for the measurement of rifampicin (RFP) in plasma or biological fluids from humans. A rapid, sensitive, precise and specific bioanalytical method using liquid chromatography coupled with tandem mass spectrometry was developed and validated for quantitation of RFP. The assay was based on the liquid-liquid extraction of samples with n-butyl acetate and selected reaction monitoring of positive ions monitored with monitoring-to-charge transition  $m/z$  326→196. The proposed method was validated for accuracy, precision and selectivity. RFP was not affected by significant endogenous plasma components in blood, and showed a good linear relationship ( $r(2) \geq 0.9998$ ) in a concentration range of 10.0-1000 ng/mL. The lower limit of quantification was 10.0 ng/mL. The results from the proposed method were in good agreement with the previously reported method. The method was applied to a preclinical study with rat plasma. Here we go again. How many more times are the cries of “anti-Semitism”, “Islamophobia” and “racist” going to be used to silence those who dare to ask uncomfortable questions about Islam’s connection to terrorism? Why was a man who had never even heard of Anjem Choudary arrested, charged and remanded in custody in England for what was a non-violent protest? Will that stop the British government and the mainstream media from their tawdry relationship with Islamic terror groups and others like it? The answer to both questions is “no” and that’s only the beginning of the answers to the great questions that Theresa May and other British political leaders are afraid to answer.
