Markup Import is a tool that allows designers to rapidly import feedback (such as notes, drawings, and verbal comments) to be incorporated into the current design. This functionality is designed to replace the process of receiving feedback through hand sketches, sketches on paper, or feedback in other media. This allows a greater degree of dynamic change to a design as compared to using static static sketches, and eliminates the need for a designer to take an additional step to hand-draw a change, while improving the efficiency and speed of working with feedback. When importing feedback, the imported markup is automatically applied to the current drawing. If you want to edit the imported markup, you can do so by accessing the markup using the same dialogue window where you created the original drawing. Features: Two-way communication between paper and the design. The designer can import feedback from printed paper or PDF documents (for example, notes, sketches, and comments) to be incorporated into the current design. These comments can be applied to any element on the drawing and are automatically applied if the designer does not choose to edit the feedback. For example, when importing a verbal comment, if the designer chooses to save the feedback, it will be automatically applied to the current design. In this way, you can receive feedback in a format that works with your existing process, and then easily incorporate it into your design. Importing feedback from paper requires importing a separate PDF file that is created from the printout of a paper. This PDF is the only file necessary for importing the feedback. You can also import feedback directly from the web, by importing a reference file that contains the URL to the webpage where the feedback was received. Markup Import functionality provides a two-way communication between paper and the design. It enables the designer to import feedback from a variety of locations, including paper, PDFs, and webpages. There are two methods for importing feedback into your design: Markup Assist: In addition to quickly importing feedback, users can also modify the feedback that they imported using a dialogue window that appears after importing. Markup Assisted Import: Using the Markup Assist functionality, designers can import feedback in an automated fashion, with the ability to add comments, redraw elements, and change aspect ratios (for example, from 4:3 to 16:9) without opening a dialogue window. The ability to import drawings from other applications or systems You
